

CUSTOMER SHOPPING BEHAVIOR

Customer Shopping Behavior

What 3,900 purchases say about revenue concentration, loyalty, discount dependence, and growth priorities.

Customer Shopping Behavior Analysis.pdf · SQL outputs and dashboard summary

A 3,900-purchase dataset reveals a retention-heavy customer base

79.9% LOYAL

Retention is the base, not the afterthought.

In the 3,900-customer dashboard base, loyal customers account for 3,116 customers. Returning customers contribute 701; new customers contribute 83.

Returning: 18.0% · New: 2.1%

Male customers generated 2.1× the recorded revenue

Gender

67.8%

of the combined gender total came from male customers.

The SQL output records 157,890 in male revenue versus 75,191 in female revenue. The gap is a concentration signal to investigate—not a causal explanation.

Express shipping correlates with a higher basket, while subscriptions have not lifted spend

Average purchase by shipping type

Express is 2.02 higher, or +3.5%.

Source: Customer Shopping Behavior Analysis.pdf — SQL shipping-type comparison and subscribers-vs-non-subscribers outputs.

Subscription comparison

Average spend is near-flat: 59.49 vs 59.87.

Discount demand is concentrated in a handful of products

2.63_{pp}

Top-to-bottom spread

Hat leads at 50.00%; Pants sit at 47.37%.
Discounted purchase rates cluster tightly across these five products.

Young adults lead revenue, while loyalty is the growth engine

Age group

6,380 AHEAD

Young adults lead seniors by 11.4%.

Young-adult acquisition is the clearest near-term growth opportunity in the age-group output. Pair it with loyalty rewards for repeat buyers—the dataset's strongest existing engine.
